```

The present invention relates to novel Streptococcus agalactiae
CC nucleotide sequences (I; ADV87607-ADV87745) and novel polypeptides (II;
CC ADV87746-ADV89950). The nucleotide sequences encode polypeptides of S.
CC agalactiae involved in the synthesis of amino acids, cell membranes,
CC intermediate (central) metabolism, energetic metabolism, fatty acid and
CC phospholipid metabolism, nucleotide metabolism including purines,
CC pyrimidines and/or nucleosides, regulatory functions, replication,
CC conditions, sensitivity to medicines and/or analogues, functions related
CC conditions, sensitivity to medicines and/or analogues, functions related
CC transposons, biosynthesis of cofactors, prosthetic groups and
CC transporters, cell membrane proteins and cellular machinery. (I) are
CC useful for the detection and/or amplification of nucleic acids.
CC useful for the present parent prostness of colored transporters and composition comprising (I) or (II) are useful for
CC contains 6617 sequence whereas the present patent only contains 2344 BP; 31762 A; 16284 C; 17028 G; 30522 T; 0 U; 0 Other.

The present invention relates to novel Streptococcus agalactiae
CC nucleotide sequences (I; ADV78860-ADV78998 and ADV83341-ADV85476) and
CC novel polypeptides (II; ADV78999-ADV81203 and ADV83341-ADV83340). The
CC mucleotide sequences encode polypeptides of S. agalactiae involved in the
CC synthesis of amino acids, cell membranes, intermediate (central)
CC metabolism, energetic metabolism, fatty acid and phospholipid metabolism,
CC nucleotide metabolism including purines, pyrimidines and/or nucleosides,
CC regulatory functions, replication, transcription, translation, protein
CC transport, adaptation to atypical conditions, sensitivity to medicines
CC and/or analogues, functions related to transposons, biosynthesis of
CC cofactors, prosthetic groups and transporters, cell membrane proteins and
CC cellular machinery. (I) are useful for the detection and/or amplification
CC cellular machinery. (I) are useful for the detection infection. The complete
CC useful for treatment of a bacterial S. agalactiae infection. The complete
CC genome of Streptococcus agalactiae is given in ADV81204. Note: The
CC contains only 2144 semisories.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to compositions and methods for detecting group Streptococci (GBS) Streptococcus agalactiae capsular polysaccharide synthesis (cps) gene in sample. The invention is useful for detecting agalactiae in a sample. The present sequence is S. agalactiae cps gene This sequence is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel oligonucleotide probes for detecting Streptococcus agalactiae in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 25020 BP; 8592 A; 3630 C; 4594 G; 8204 T; 0 U; 0 Other;

```
This invention relates to a novel method of typing a group B streptococcus (GBS) bacterium which comprises analysing the nucleotide sequence of one or more regions within the cpsD, cpsE, cpsE, cpsG and/or cpsI/M genes of the bacterium, where the regions comprise one or more nucleotides having sequences that vary between types. The method is useful for preparing a composition for serotyping and/or subtyping a GBS useful for diagnosing GBS infections in pregnant women, elderly and/or immunocompromised patients. The present sequence is that of a consensus DNA sequence for the 3' end of the cpsD-cpsE-cpsF and the 5' end of the cpsG sequences of group B Streptococci which is related to the method of
                                                                                                                                                                                                                                                                                                                               2
                                                                                                                                                                                                                                                                                                                                                                           gene of the bacterium
                                                                                                                                                                                                                                                                                                                               1; 106pp;

CThis sequence represents a fragment of the EPS plasmid derived from L. CC lactis subspecies cremoris Ropy352. The EPS plasmid is about 32 kb in CC size and encodes at least 13 active genes. The enzymes encoded by these CC genes allow the bacteria to produce an exopplysaccharide, designated CC EPS352. When EPS352 is expressed in or added to milk, it imparts highly CC desirable sensory characteristics to the milk, including making the milk very thick, with a very smooth mouth-feel, and slightly sweet with an CC obvious chewable-bite. Open reading frames (ORF's) M and N show homology CC to glycosyltransferase involved in EPS352 hosynthesis. L. lactis CC cremoris Ropy352 is deposited with the USDA-ARS-NCAUR-NRRL as deposit CC cremoris Ropy352 is deposited with the USDA-ARS-NCAUR-NRRL as deposit CC cliquid, and a fruit-juice. It is also useful for thickening a liquid CC selected from milk, a milk-based liquid, a whey-based liquid, a soy-based CC indicated, schematically, in the specification that there is an CC additional ORF between those encoding EpsE and EpsO. This encodes EpsF CC (AAB47425). However, this ORF is not indicated on the actual DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
